

Heberlein Technology (Switzerland) joins ITMF as Corporate Member

Published: October 17, 2024

Author: TEXTILE VALUE CHAIN

Heberlein Technology, which was established in 1835, is a top supplier of air texturing and interlacing jets for synthetic continuous filament yarns worldwide. The creation and manufacturing of highly specialized essential parts for the process-optimized finishing and treatment of synthetic yarns, particularly filaments, is Heberlein's primary area of expertise.

Mr. Christian Schindler, Director General of ITMF, declared, "Heberlein Technology is a welcome corporate member of ITMF, and ITMF is thrilled to have them join. The diversity of members from across the textile value chain, including manufacturers of textile machinery and components, adds value to the ITMF. The ITMF's membership and expertise will grow and be strengthened by Heberlein's proficiency in air interlacing and air texturing jets for synthetic continuous filament yarns. Conversely, Heberlein Technology will benefit from having access to additional textile value chain segments.

Mr. Martin Zürcher, CEO of Heberlein Technology, emphasized that "joining ITMF means access to a unique international network as well as very informative statistics, surveys, and reports that help to better understand the dynamics of the industry." ITMF conferences provide a wealth of information and an opportunity to network with influential industry figures throughout the whole textile value chain.
