

Netherlands-based RE&UP Recycling Technologies joins

🕒 TECHNICAL TEXTILES TODAY 📅 October 29, 2024

The circular technology business RE&UP Recycling Technologies is changing the conventional textile-to-textile paradigm. It makes circular solutions a reality by creating Next-Gen Cotton and Next-Gen Polyester that function as well as virgin fibres, solving the planet's most urgent difficulties. At the ITMF Annual Conference 2024 in Samarkand, Uzbekistan, earlier this year, RE&UP was presented with the ITMF Start-up Award 2024.

“Welcoming RE&UP Recycling Technologies as a new corporate member of ITMF is a mutually beneficial step,” said **Mr. Christian Schindler, Director General of ITMF**. It is beneficial for ITMF members to have a business in their membership that is engaged in a extremely significant technology that is essential to expanding the industry's circularity initiatives. Being a member of the ITMF gives RE&UP access to a special global network and more pertinent data.

“Being a member of ITMF, RE&UP is joining a unique organisation that provides important data that allows us to better assess the short-term and long-term evolution of the industry,” stressed **Mr. Andreas Dorner, General Manager of RE&UP Recycling Technologies**. Additionally, members of ITMF come from all over the world and along the textile value chain. This facilitates the development of a global professional network, which is even more crucial in light of circularity.
