

S&P Global Inc. (UK) joins ITMFas Corporate Member - TECHNICAL TEXTILE VALUE CHAIN

TECHNICAL TVC

S&P Global offers workflow solutions, analytics, and vital insight to the global commodities, capital, and automotive industries. S&P Global Commodity Insights, one of the five business divisions, covers chemicals and textiles, oil and gas, electricity, metals, shipping and agriculture. After IHS Markit and S&P Global merged in March 2022, well-known and industry-leading brands became part of S&P Global Commodity Insights. Leading data sources and technology regarding the macroeconomy, regions, and sectors are provided by S&P Global Market Intelligence, which also collaborates with clients to help them see things more broadly and confidently.

ITMF Director General Mr. Christian Schindler said, “ITMF is extremely happy to welcome S&P Global as the newest corporate member. S&P Global is a well-known business that offers useful data across geographies and sectors, and it now covers the textile and fiber industry upstream. Companies from the whole textile industry as well as allied industries should gather at ITMF to meet and talk about issues pertaining to the full value chain as it is beneficial to both parties. S&P Global may gain by being nearer to the industry and so having a greater knowledge of the forces influencing it, even if it has a wealth of experience to share.

S&P Global Inc. Associate Director Ms. Tatiana Bondar said that “by having With ITMF, S&P Global will now have access to a wealth of insightful studies, data, and publications that advance knowledge of the fiber and textile industries. Participating in specific ITMF events such as webinars, special workshops, and annual conferences gives you access to in-depth information and puts you closer to the market. Being a part of the industry you serve and having quick access to global industry experts and information are crucial in today’s increasingly complicated and interconnected world. I think think the ITMF and its members will benefit from the efforts of our fibers team, which is represented in EMEA, Asia, and America, if they continue to remain tuned.”
